Sprinklenet

CAPABILITIES STATEMENT

Consulting and Technology Services for Federal Programs

Sprinklenet provides management consulting, information technology services, and senior advisory to federal agencies, defense programs, and prime contractors. Orders are placed through the GSA Multiple Award Schedule. Knowledge Spaces, Sprinklenet's commercial platform, is available when a program needs governed knowledge or AI. Founded in 2013.

Company Overview

Federal agencies, defense programs, and prime contractors engage Sprinklenet for advisory, consulting, engineering, and program delivery, through the GSA Multiple Award Schedule or a teaming arrangement. Work is scoped to the requirement and staffed from the labor categories on this statement. Knowledge Spaces is a commercially available product in production. It is used when the requirement calls for it. Each requirement is reviewed for contract scope and ordering fit. A scoped pilot runs first, and production follows the agency's authorization path.

Core Capabilities

Management Consulting and Advisory

Senior Consultant, Project Consultant. Discovery, process mapping, and operating-model work that connects policy to daily operations. Retained advisory for program leadership on investment, risk, and policy. Compliance support covers DCAA readiness, indirect cost rates, incurred cost proposals, and internal controls.

Application Engineering and Integration

Software Engineer, Systems Architect, Senior IT Consultant. Custom applications, APIs, and interfaces between financial management, budgeting, and reporting systems. Data migration from legacy sources, with reconciliation that shows the migrated data is complete. The work includes code review, testing, and production support, and it is built for the requirement.

Program and Project Management

IT Project Consultant, Project Consultant. Charters, schedules, risk and issue logs, dependency tracking, and executive reporting. Delivery is tied to accepted deliverables, with the governance record a program office expects.

Data Analytics and Decision Support

Senior IT Consultant, Software Engineer. Reporting, dashboards, and analysis for program leadership. Each figure is tied to the records behind it. The source system remains the system of record.

Point of Contact: Jamie Thompson, Founder and Chief Executive Officer

Core Capabilities

Artificial Intelligence

Senior Consultant, Systems Architect, Senior IT Consultant. Advisory on where AI belongs, secure integration with the systems a program already runs, and custom applications. Cited answers for policy, records, and acquisition knowledge. A person approves any consequential action. Governance work aligns to the NIST AI Risk Management Framework and OMB M-25-21. Knowledge Spaces is used when the program wants one operator for knowledge, retrieval, and the audit record.

Operational Readiness and Design

Graphic Designer, Project Consultant, Senior Consultant. Training, change support, user acceptance, and cutover. Interface, communications, and information design for the people who will use what was delivered.

Differentiators

- **Senior staff do the work.** The people who scope an engagement stay on it. Labor is drawn from the categories on this statement and supervised by senior Sprinklenet staff.
- **Built for the requirement.** Applications, integrations, and procedures are produced for the order. A program does not have to adopt a packaged product to buy the service.
- **Services first.** Advisory, consulting, engineering, and program management are ordered on their own. Knowledge Spaces is added when the program wants the commercial platform.
- **Records the program can check.** On AI work, each answer cites its source. On other work, acceptance rests on deliverables, test results, and reconciliation.

Security and Deployment

FedRAMP	Knowledge Spaces runs on AWS, and its security controls are aligned to NIST SP 800-53. Our systems and security program are ready for FedRAMP authorization, which we will pursue with an agency sponsor.
Authority to Operate	System security plan, control implementation statements, plan of action and milestones, and continuous monitoring evidence for the authorizing official.
Identity and Audit	Multi-factor authentication, SAML 2.0 SSO, and PIV, CAC, and PKI support; four-tier roles and more than 40 audit event types with an exportable audit trail.
Deployment	Dedicated deployments scoped to the program's FISMA categorization or impact level, on AWS GovCloud, Azure Government, Google Cloud Assured Workloads, or on-premises infrastructure, including air-gapped networks for defense and other sensitive programs.
Accessibility	Section 508 conformance on every federal application, including an Accessibility Conformance Report.

How to Buy

- **Direct orders** through GSA MAS SIN 541611 for management consulting and SIN 54151S for information technology professional services, as firm-fixed-price services tied to accepted deliverables.
- **Larger vehicles:** a BPA against the Schedule, a GSA Contractor Team Arrangement, or a subcontract under a prime's IDIQ.
- **Purchase card** accepted on Schedule orders within the cardholder's limit.
- **Teaming:** prime or subcontractor; our small business status counts toward subcontracting plan goals.

Labor Categories

- **Senior Consultant.** Management consulting and senior advisory.
- **Project Consultant.** Business process and program support.
- **Senior IT Consultant.** Technical advisory, integration, and analytics.
- **IT Project Consultant.** Information technology program management.
- **Systems Architect.** Solution and systems design.
- **Software Engineer.** Application development and integration.
- **Graphic Designer.** Interface, communications, and information design.

Data Rights and Staffing

The government keeps its data and receives the project-specific deliverables first produced under the order, including application source code and connectors written for that order. Knowledge Spaces, when an order uses it, is Sprinklenet's pre-existing commercial software, developed at private expense, provided as a hosted service or under a commercial license, and not a deliverable. Senior engineers and key personnel, from Sprinklenet or a partner firm we train and support, work on site and are vetted to the level the program requires.

Relevant Experience

Sprinklenet performed as prime recipient on an Air Force Office of Scientific Research grant, a basic research award completed in March 2024, with Jamie Thompson as Principal Investigator. The award is listed on USAspending.gov, and the program officer accepted the final performance report. Public work includes FARbot, CASbot, and SpendBot at sprinklenet.com/compliance-lab, and a public comment to the NIST NCCoE on AI agent identity and authorization. Commercial past performance summaries are available on request.
